Fall Biology + Pre-Dental General Graduation Plan

*****This plan is designed for students completing their undergraduate degree in four years, entering dental school immediately after, and starting during a Fall Semester. Adjust course suggestions to fit your needs. If you have no AP/concurrent/transfer/language credits, you'll need to add more credits to get the 120 you need to graduate. *****

Begin Dental School the Following Fall

*** These classes are Pre-DAT classes - make note that you do not need Biochemistry or Physics for the DAT**
**** These classes are in the Biology major and will help with your understanding and some dental schools might require them**
***** These classes are required of dental schools but are not on the DAT**

Please not that htis plan and classes are applicable for most pre-requisite class requirements, however, we encourage students to look at the schools they are most interested in to make sure they are taking the requirements for their school of choice
